

Premium/Discount Information

Through September 30, 2019

The tables that follow present information concerning the differences between the daily net asset value (“NAV”) per share of each Fund and the market trading price of such share. The NAV is the price at which a Fund issues and redeems its shares and is calculated as described in the Fund’s prospectus. The market price is the midpoint of the highest bid and lowest offer for the Fund’s shares as of the close of trading on the exchange where Fund shares are listed for trading.

Most investors will buy and sell shares of the Funds in secondary market transactions through brokers at market prices rather than at NAV. The market price of shares of a Fund may be greater than (a premium), equal to, or less than (a discount) NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of shares of each Fund. Differences between the closing times of the U.S. and non-U.S. markets may also contribute to differences (negative or positive) between the NAV and market price of Funds that invest in non-U.S. securities if events materially affecting the value of a security in a Fund’s portfolio occur after the close of trading on a foreign market but before a Fund calculates its NAV.

The following charts are provided to show the frequency at which the closing price for the Funds were at a premium or discount to their daily NAV for the period January 1, 2018 (or inception date of the Fund, if later) through December 31, 2018 and subsequent calendar quarter-ends.

The charts presented represent past performance and cannot be used to predict future results. Shareholders may pay more than NAV when they buy Fund shares and receive less than NAV when they sell those shares because shares are bought and sold at current market prices
