3. The Integrity Micro Cap Value Equity Composite includes all accounts, except wrap fee paying accounts, and focuses on micro-cap companies that are currently trading below our estimate of intrinsic value and are characterized by improving investor sentiment. Effective October 2015, the Integrity Micro Cap Equity Composite was renamed to the Integrity Micro Cap Value Equity Composite. The composite creation date is February 2011.
4. The benchmark of the composite is the Russell Microcap® Value Index. Prior to October 2015, the benchmark is the Russell Microcap® Index. The benchmark was changed prospectively as the firm believes the current benchmark provides a more representative comparison of the composite strategy. The Russell Microcap Value Index measures the performance of the micro capitalization value segment of the U.S. equity market. It includes those companies with lower price-to-book ratios and lower forecasted growth rates in the Russell Microcap® Index, which comprises the smallest 1,000 companies in the Russell 2000® Index plus 1,000 smaller U.S. equities. You cannot invest directly in an index. The Russell Microcap® Index measures the performance of the microcap segment of the U.S. equity market. Microcap stocks make up less than 3% of the U.S. equity market (by market cap) and consist of the smallest 1,000 securities in the small-cap Russell 2000® Index, plus the next 1,000 smallest eligible securities by market cap. The benchmark returns are provided to represent the investment environment existing during the time periods shown and are not covered by the report of independent verifiers. For comparison purposes, the index is fully invested, which includes the reinvestment of income. The returns have been taken from a published source and do not include any transaction fees, management fees, or other costs.
5. The internal dispersion of annual returns is measured by the standard deviation of asset-weighted gross returns of accounts included in the composite for the full year. If less than six portfolios are included in the composite for the full year, no dispersion measure is presented, as it is not considered meaningful (N/M). The three-year annualized ex-post standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. It is not required to be presented for annual periods prior to 2011 or when a full three years of composite performance is not yet available.

6. Composite and benchmark returns are presented net of non-reclaimable withholding taxes. Gross-of-fees returns are presented before management and custodial fees but after all trading expenses. Net-of-fees returns are calculated by deducting 1/12 of the highest tier of the standard fee schedule in effect for the period noted (the model fee). The composite model fee for each period is either the highest tier of the current fee schedule or a higher value, whichever is required to ensure the model composite net-of-fee return is lower than or equal to the composite net-of-fee return calculated using actual fees. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. The firm's fees are available on request and may be found on Part II of its Form ADV. The complete fee schedule for this product is:

Market Value	Annual Fee
First \$15,000,000	1.00% (Min. Annual Fee: \$50,000)
Next \$35,000,000	0.90%
Next \$50,000,000	0.80%
Thereafter	0.75%
