

## Executive Summary

- Global equities, as measured by the MSCI All Country World Index, were essentially flat. The strategy posted a positive return and outperformed its benchmark, the MSCI All Country World Index.
- Stock selection was the main driver of the portfolio's outperformance.
- Financials, information technology, and consumer staples were the portfolio's best performing sectors.
- As always, the strategy is guided by our philosophy that positive investment outcomes can be attained through the use of a data-driven discipline in conjunction with a bottom-up approach to investing.
- Our proprietary research methodology, combined with a set of industry standard and team-generated global risk factors, seeks to capture information inefficiencies in the global equity markets.

## Market Review

Global equities, as measured by the MSCI All Country World Index, were essentially flat in the third quarter as positive performance in North America (+1.2%) and Japan (+3.1%) was offset by declines in emerging markets (-3.5%) and Europe (-1.6%). Though the ultimate quarter-end result was unremarkable, it masked significant intra-quarter volatility. An August swoon followed by a September recovery made for a turbulent ride as macroeconomic activity as well as market factor leadership fluctuated a great deal.

In the United States, though, GDP growth appears to be slowing from its second quarter 2018 peak of 3.2%, the labor market remains supportive, and a recession does not appear imminent. In China, monetary and fiscal stimulus (including tax cuts) are having a positive effect, as the Caixin China PMI rose to 51.4 in September.

On the political front, in a bid to further his Brexit agenda, U.K. Prime Minister Boris Johnson asked Queen Elizabeth II to suspend Parliament, only to have the Supreme Court in London rule the act unlawful and Parliament enact a law prohibiting the country from leaving the European Union without an agreement. The Irish border remains the biggest sticking point and, as of this writing, negotiations remains ongoing ahead of an October 31 deadline. This uncertainty continued to weigh on the U.K. market as stocks underperformed, down 2.5%.

As for Europe more broadly, economic data was largely disappointing. The September Manufacturing PMI slipped to 45.6 (below 50 indicates contraction), while the Services PMI slowed by 1.5 points to 52. Leading indicators such as new orders were particularly lackluster and suggest GDP may slow below 1% in the fourth quarter. Germany, long considered the engine of Europe, sputtered to a 49.1 reading, the lowest reading in six years. At the same time, as growth prospects for the continent dwindled, the euro continued to grind lower against a strong U.S. dollar.

Heading east, Asia was home to a mix of both the best and worst performing markets. Japan rose 3.1%, placing it among the best performing countries in the MSCI ACWI. Though the Bank of Japan left its policy unchanged, it kept the door open for additional easing given overseas risks. Meanwhile, on the domestic front a 2% consumption tax hike came into effect, partially distorting consumer spending patterns. While the government sought to avoid a boom-bust cycle similar to that which occurred in 2014 after the initial hike, economists still expect a quarter-over-quarter contraction in fourth quarter GDP. On the opposite end of the spectrum was Hong Kong, which plunged 12% on the back of continued protests.

## QVS Factor Performance

In this section, we offer insight into the factors driving market performance from a quantitative point of view. The RS Developed Markets team's proprietary QVS (Quality, Value and Sentiment) Model scours the globe,

screening over 10,000 companies while looking for the best investment opportunities. It is designed to identify companies that have the potential to consistently create shareholder value, are reasonably valued, and exhibit favorable market sentiment. We continually use this quantitative model to help us focus our resources and fundamental research on those companies with the highest probability of outperformance.

While all factors contributed positively to performance in the third quarter, leadership fluctuated substantially on a week-to-week basis. Indeed, from late August through mid-September, Quality and Sentiment posted some of their worst readings since 2013, while Value strung together one of its best streaks. Alas, the long-awaited Value rally quickly fizzled in the second half of September, and Quality/Sentiment regained leadership.

## Portfolio Review

As of September 30, 2019, the portfolio consisted of 93 securities, with the top ten representing approximately 23%. Sector (GICS) weights at quarter-end were: Information Technology (14.0% vs. 16.3% for the index weight); Health Care (11.8% vs. 11.4%); Consumer Discretionary (11.7% vs. 10.9%); Communication Services (7.4% vs. 8.9%); Financials (18.5% vs. 16.6%); Industrials (12.5% vs. 10.4%); Energy (4.6% vs. 5.6%); Consumer Staples (9.3% vs. 8.5%); Real Estate (1.2% vs. 3.3%); and Materials (3.8% vs. 4.8%). Active share was 81%.

## Attribution

The RS Global strategy once again outperformed the MSCI All Country World Index (Net), the ninth straight quarter of outperformance. Stock selection and sector allocation both contributed to the portfolio's outperformance. The portfolio's financials, information technology, consumer staples, health care, utilities, energy, and communication services sector holdings outperformed those of the MSCI All Country World Index during the third quarter. The portfolio's health care sector holdings showed the highest relative return, with stock selection leading the way. Notably, industrials was the worst performing sector in the benchmark. Texas Instruments (+13% in portfolio total return), Estee Lauder (+9%), MGE Energy, Inc. (+10%), CVS Health Corporation (+16%), Nestle (+15%), Ross Stores (+11%), and Alphabet Inc. Class C (+13%) were the top contributors to the portfolio, while Rio Tinto PLC (-13%), Evraz PLC (-28%), MSCI Inc. (-9%), WashTec AG (-24%), and Cisco Systems (-9%) were the largest detractors from performance.

The portfolio benefited by being overweight in health care, consumer staples, and financials. The portfolio also benefited from being underweight in energy, information technology, and communication services. The portfolio was disadvantaged by its underweight in materials and real estate, as well as by its overweight in consumer discretionary and industrials.

## Portfolio Actions

We made a few changes to the portfolio in keeping with our long-term, bottom-up investment approach for the third quarter. During the quarter, we initiated two positions. We also increased and trimmed existing positions.

This quarter the portfolio initiated two new positions: Kirkland Lake Gold and Parex Resources. Kirkland is a gold producer with mines in Australia and Canada. Its main assets are the Fosterville and Macassa mines, accounting for more than 80% of the total production, which reached 723.7 koz in 2018. The Holt Mine Complex in northeastern Ontario accounts for the remaining 20%. The company has an extensive pipeline of growth projects and exploration opportunities.

Parex is engaged in crude oil exploration, development, and production in Colombia. It holds interests in onshore exploration and production blocks totaling approximately 2.3 million gross acres.

No positions were eliminated.

## Outlook

We expect market volatility to continue and will remain vigilant when constructing our portfolios, remaining sector and region neutral, as we believe that strong risk management should be at the forefront of any global equities strategy in this market. Making correct macro allocation calls can be immensely challenging; therefore, we do not forecast regional performance. In our view, stock selection can be far more impactful to portfolio performance than allocation.

We thank you for your continued support.

Sincerely,

**The Victory RS Developed Markets Team**

- 1 The MSCI All Country World Index (Net) is generally considered to be representative of the international stock market activity. The Index is unmanaged and not available for direct investment. The Index reflects no deduction for fees, expenses or taxes except foreign withholding taxes. Index performance is shown for illustrative purposes only.
- 2 Portfolio holdings are subject to change and should not be considered a recommendation to buy or sell individual securities.

Composite and benchmark returns are presented net of nonreclaimable withholding taxes. Gross-of-fees returns are presented before management and custodial fees but after all trading expenses. Net-of-fees returns are calculated by deducting 1/2 of the highest tier of the standard fee schedule in effect for the period noted (the model fee). The composite model fee for each period is either the highest tier of the current fee schedule or a higher value, whichever is required to ensure the model composite net-of-fee return is lower than or equity to the composite net-of-fee return calculated using actual fees.

Investing involves risk, including the possible loss of principal and fluctuation of value. Returns are expressed in U.S. dollars.

Information relating to portfolio holdings is based on the representative account in the composite and may vary for other accounts in the strategy due to asset size, client guidelines and other factors. The representative account is believed to most closely reflect the current portfolio management style.
